

Hello!

I am your new Standing Bubble Wall

CONTENTS

Make sure we're all in your box

OUR COMMITMENT TO YOU

Here at Playlearn, we have spent many years developing our Bubble Walls and Bubble Tubes to ensure they are simple to set up and trouble-free, so you can spend more time enjoying it and less time setting it up. We want you to love your Bubble Wall, so please let us know if any questions come up. Please email us at support@playlearn.com and we will get back to you within 48 hours. The Bubble Wall is a delicate product and must be looked after and maintained to get optimal use. Any time maintenance is required (and certainly for emptying the water!), we recommend that two people do this together.

DISTILLED WATER / REGULAR WATER

Although this product has been designed to work well with tap water, the product will need higher maintenance due to algae and the water becoming cloudy. The water will need changing approximately once every few months. By using distilled water, the water and product will stay clean for longer.

BRING A FRIEND ALONG

We recommend setting up with two people

INSTRUCTIONS

Place the base on floor / flat surface and remove the trays (#4 on Contents Page).

1

Slide panel into base. While doing this make sure not to trap the white air tubes. Connect the black wire coming out of the air pump to the white wire coming out of the controller box.

2

Connect the white tube from the panel to the air pump. They are intentionally a little stiff, in order to keep them from slipping out.

3

Add water until panel is about 10% full.

4

Feed the adaptor wire (#8) though the hole, into the base (#5). Connect the adaptor to the power port on the controller box (#7) and switch it on with the remote (#9) or the app.

5

Test the product with the remote control (#9) or the app. Check that the product is working properly.

6

Fill Bubble Wall with water until 2" from the top of the panel (#2). PLEASE NOTE Jets can take up to 24 hours to reach their full operating capacity. Please allow for this time for them to "break in".

7

Place the lid (#1) onto the top of the Bubble Wall.

8

Return the trays (#4) to the base (#5) of the Bubble Wall. Fill the trays with the decoration rocks (#3).

9

Place the customer support sticker on your Bubble Wall in case you need to reach out to us at any time.

10

EMPTYING WATER FOR MAINTENANCE AND STORAGE

We have provided a maintenance hose to aid in emptying your Playlearn Bubble Wall. Attach the water pipe to the nozzle closer to the handle on the manual pump and place the other end of the pipe deep into the panel. Place a large bucket on the floor (or at a lower point than the end of the pipe) and start pumping until the water starts flowing.

REMOTE

The remote operates the following way:

Power	Turns the product on and off
Play/Pause	Turns the light on and off
Brightness	Adjusts the brightness of the light
Colors	Changes the light to button color
Auto	Light will gradually change between all colors
Jump 3/Jump 7	Light will jump between red, green and blue / Light will jump between all 7 colors
Fade 3/Fade 7	Light will fade between red, green and blue / Light will fade between all 7 colors
Flash	Light will flash on and off
Speed +/-	Increases/decreases speed of the light changing

See next page for app instructions.

CRACKED PANEL If your panel is cracked, please contact customer support immediately.

NO BUBBLES COMING OUT If the pump is not making noise, please check that the pump is connected to the controller box (instruction #2). If the connection is correct, but the pump still isn't making noise, please contact customer support.

If the pump is making noise, please check that the white tube is connected to the air pump (instruction #3). If the connection seems okay, please check along the whole length of the white tube to ensure it is not kinked or bent. If all seems right, please pull off the pipes attached to the pump and feel if air is coming out. If no air is coming out of the pump, please contact customer support. If air is coming out, reattach the pipes and check at the other end to ensure that the pipes leading into the panel are letting out air. If no air is coming out of the pipe, the exit is blocked somewhere along the pipe. Please contact customer support. If air is coming out of both exits, please refer to the next section.

SOME JETS ARE WORKING, SOME ARE NOT On occasion, some of the air jets break in faster than the others. Since some are fully "broken into", the water is bypassing the jets that have not yet "broken in". If this occurs, follow these steps. Under each air jet, at the bottom of the panel, is a small dial that can be adjusted. Ensure that the dial under the non-working jets are open, by loosening them. Then, close the dials under the jets that are currently working by tightening them. This should stop around 90% of the bubbles. By doing this, pressure will be forced into the open jets, forcing the air bubbles to break through them. Please keep it like this for a few hours, to allow the jets to be fully "broken into". After a few hours, you can adjust all the dials back to a regular, even setting.

REMOTE CONTROL NOT FUNCTIONING The remote control is designed to change the colors of the lights and to change the light pattern. If the lights are on but they are not changing with the click of the remote control, try going a little closer to the base of the Bubble Wall. The red LED light turning on doesn't mean there is a good battery. If it still does not work, please change the battery. If this fails to fix the problem, contact customer support for a replacement.

NO POWER First, touch the adaptor and see if it feels warm. If it is cold, contact customer support for a new adaptor. If the adaptor is warm, check the connection into the controller box (instruction #5) by removing and reinserting it and press the "on" button on the remote control. Check the white wires coming out of the controller box are firmly connected to the plug and lights. If this still does not resolve the problem, please contact customer support.

CAUTION Always unplug the power before cleaning and handling. Disconnect and drain the water if storing away for an extended period of time. Do not operate with hot or ice-cold water. Do not lift, carry or pull the Bubble Wall by the power cord. Do not exceed the maximum voltage and wattage on adaptor.

STILL STUCK? Confused? Any further questions? Please contact customer support and one of our reps or techs would be happy to walk you through it.

SETTING UP THE APP

Search your phone's app store for "Playlearn".

Make sure your Bluetooth is "on". Download and open the app.

Press the menu icon on the top left corner.

Press "my devices" and select the device listed in drop down until the connected link icon.

Your Bubble Wall must be turned "on" to establish a connection to the app.

WARRANTY INFORMATION Thank you for choosing Playlearn's Bubble Wall. All of our products are made with the highest quality materials. In the event that a product does not have our usual standard of excellence, we will repair or replace it, at our discretion, within 12 months from the date of purchase. A valid proof of purchase, with the purchase date clearly indicated, must be provided. Photos of defective merchandise may also be required to help us evaluate the cause of the defect.

WATER DAMAGE This product is not manufactured to withstand extreme temperatures. Improper storage that allows water to freeze within the Bubble Wall will cause damage and is not covered under the warranty. The use of "hard water" and/or caustic cleaners can affect the finish of the Bubble Wall. Failure to keep the unit clean, and use of additives/cleaners, will also void the warranty.

NOT COVERED UNDER THE WARRANTY The warranty will NOT cover cases of damage due to: inadequate care, immersion in water or improper installation, storage or maintenance.

This warranty also does not cover any additional charges or installation, removal, disposal, shipping costs or consequential damage associated with any warranty claim.

WARRANTY

Enjoy!
